

Hello, i'm Nathan, im from brazil and i speak a little english, i learn this language on games, music, and series before my eight years. With this, i developing every day my english with practice in game, and speaking with friends, reading books, between others.

What is an AGI?

AGI it's a new intelligence artificial(artificial general intelligence) she is a spectacular machine, with the capacity to learn with humans and any others technologies

How NLP (Natural Language Processing) works and where can we use it?

The NLP(Natural Language Processing) Works with a computer program with the technology to read spam that instantly converts to your language to help humans to communicate

Can you name 3 practical ways AI could help people with disability? How?

1 - Well, there are many ways to help people AI, one of things

Two - machines can help to drive car, with the system autonomous

Three - AI can help in all, differently things with system, health, music, walking, driving, anyway have much forms a can help

About the negative impact of AI which concerns you the most? Why?

The machines have some problems, since their development and their functioning...

One of the main problems can be ignoring the command in which it was programmed, or not working as programmed.

Some machines, having the knowledge of learning, can learn bad things.

And some artificial intelligences, such as autonomous cars, are not allowed to work in some places, and in case of an accident, or some reading error, it can cause serious problems.
